

XLCubed Product Set

XLCubed Excel Edition

XLCubed brings the power and flexibility of a true OLAP reporting package into the Excel environment. Data can be browsed from any angle or level of detail with just a few clicks of a mouse. Built-in analytics such as rankings, breakouts and filters help assess and analyse data in seconds. Trends can be easily and flexibly explored within dynamic slice and dice reporting incorporating sparklines.

XLCubed leverages Excel's strengths as a calculation engine and modelling tool, while the connectivity to Analysis Services removes the risks of Excel when it is used as a data source, or 'spreadmart'.

Dashboards, reports and analyses built in Excel can be simply published to XLCubed Web Edition for wide scale deployment.

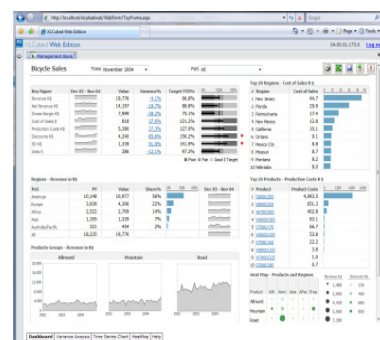

Build in Excel

XLCubed Web Edition

Excel is a productive and extensible environment for report development and analytics. However it is relatively weak as a vehicle for report deployment. With XLCubed, reports can be built in Excel, visualised with MicroCharts and native Excel charting, and published to the web. The web edition is true thin client, the only requirement is Internet Explorer.

The web reports remain data connected, either to Analysis Services cubes or relational data sources, and fully interactive. Drill down, slice and dice, multi-sheet workbooks, and complex Excel formulae and formatting are all catered for. Reports can easily be embedded within SharePoint and other portals.

The simple publication process puts web deployment of reporting into the hands of the business user, while keeping the data itself secured on the server and in the control of IT.

One click publication to the web

MicroCharts for Excel

MicroCharts is a focused and concise visualisation tool, which puts chart types such as sparklines, bullet graphs and alert indicators into the hands of the Excel user. The charts are controlled by formulae, and implemented through fonts, giving excellent positional flexibility and maintainability. Intuitive dialogs, and a similar start point to standard Excel charts ensure users are quickly proficient, and able to add real value to their Excel based reports and dashboards.

For data connected MicroCharts, MicroCharts is a licensed component of XLCubed Excel Edition.
